

RAHUL GURJAR

Senior Azure Data Engineer | Microsoft Fabric | Databricks | Lakehouse | CDC | Power BI
Semantic Models

India | Open to Europe Relocation / Visa Sponsorship | rahulgurjar11@gmail.com | LinkedIn: in/rahulgurjar11 | Portfolio:
www.rahulgurjar.cloud

PROFILE SUMMARY

Senior Data Engineer with 9+ years of experience across Azure Data Engineering, ETL/ELT, Databricks/PySpark, SQL, cloud data warehousing and Microsoft Fabric. Hands-on experience designing lakehouse pipelines, CDC-oriented ingestion patterns, Point-in-Time (PIT) regulatory reporting, semantic models and Power BI reporting layers for banking, insurance, healthcare, telecom and prop-tech clients across Europe, US, UK and Australia. Currently working on an enterprise Microsoft Fabric PIT platform involving OneLake medallion architecture, CDC/dispatcher design discussions, Striim-based replication, data quality validation, regulatory reporting and stakeholder-facing solution design. Seeking long-term Europe-based Data Engineering opportunities with relocation sponsorship.

CORE STRENGTHS

Azure Data Factory	Microsoft Fabric / OneLake	Databricks / PySpark	Delta Lake / Lakehouse
CDC / Incremental Loads	Dispatcher / Orchestration	Striim / Kafka Concepts	Power BI / Semantic Models
Synapse / Azure SQL	ETL/ELT & Data Warehousing	Data Quality / Reconciliation	SQL Performance Tuning
Informatica / DataStage	CI/CD: ADO, Git, Bitbucket	Insurance / Banking Domain	Stakeholder Collaboration

PROFESSIONAL EXPERIENCE

Senior Data Engineer | Accion Labs India Pvt Ltd - Client: Insurance / Financial Reporting PIT Program | Jan 2026 - Present

- Contributing to an enterprise Point-in-Time (PIT) reporting platform on Microsoft Fabric Lakehouse for insurance and financial reporting use cases.
- Designed and refined Bronze-Silver-Gold architecture in OneLake to support historical immutability, snapshot-driven reporting, auditability and multi-layer validation.
- Worked on CDC-oriented ingestion design covering Salesforce-to-Fabric data capture patterns, Striim replication flows and downstream processing into lakehouse layers.
- Participated in dispatcher/orchestration design discussions for CDC run detection, marker/log-based processing, retry handling, pipeline handoff and scalable downstream execution.
- Developed PySpark and Spark SQL validation logic for reconciliation, consistency checks, schema profiling and data quality checks across Claims, Claim Transactions and related datasets.
- Built and aligned semantic model structures for PIT reporting, including fact/dimension separation, role-playing dimensions, relationship validation and report-ready business fields.
- Supported Power BI and Fabric semantic model work involving Direct Lake/semantic modeling considerations, measures, reporting fields and stakeholder review cycles.
- Supported compliance-aligned reporting discussions involving NAIC, GAAP ASC 944 and California 2644.6 requirements for claims/loss reporting and retention needs.
- Collaborated with architects, project leads and business stakeholders to translate complex regulatory reporting requirements into scalable lakehouse, CDC and semantic layer designs.
- Contributed to multi-tenant PIT architecture covering client instance ID isolation, Striim CDC, Bronze-Silver-Gold layers, Delta CDF and MLV patterns.
- Helped define dispatcher patterns for client-level change detection, queued Silver-to-Gold execution, watermark tracking and idempotent processing.

Data Engineer | Patona - Client: Kolmeo, Australia | Jul 2024 - Mar 2025

- Designed Azure Data Factory pipelines for migration workloads into Azure SQL and Delta Lake, covering landing, extract and curated zones.
- Built Synapse notebooks, Mapping Data Flows and Azure Functions for data cleansing, enrichment and workflow automation.
- Optimized SQL procedures and transformation logic for high-volume workloads, improving maintainability and pipeline execution reliability.
- Created Delta tables in Synapse/Databricks with schema governance, versioning and controlled release processes.
- Integrated CI/CD practices using Azure DevOps and Bitbucket; supported SSRS reporting for prop-tech analytics workflows.

Data Engineer | KoinWorx BV / TCS Contract - Client: Rabobank, Netherlands | May 2022 - May 2024

- Delivered Azure data engineering solutions for a Netherlands banking client using ADF, Databricks, ADLS, Azure SQL and Synapse patterns.
- Built parameterized ADF pipelines for batch ETL across SQL, Blob and Synapse sources with reusable orchestration patterns.
- Developed PySpark transformations and managed Databricks workloads for scalable processing and testing of curated datasets.
- Performed ETL testing, technical documentation, KT sessions and stakeholder requirement analysis in a global delivery setup.
- Implemented monitoring and alerting patterns using Azure Monitor and Log Analytics for operational visibility.

Associate Consultant | Stratecent India Pvt Ltd - Client: Invesco, USA | Jan 2020 - Sep 2021

- Delivered Informatica ETL mappings, documentation and release coordination for warehouse modernization and cloud migration initiatives.
- Supported Snowflake and Azure migration activities, including ADF ingestion design, data profiling and SQL/Python-based reconciliation.
- Managed DEV-UAT-PROD releases, Autosys schedules, RCA for failures and SLA-driven production support across enterprise data workflows.

Senior Software Engineer | Conduent - US Healthcare & Government Clients | Mar 2018 - Dec 2019

- Built and maintained ETL workflows using SQL, Informatica, Unix and PL/SQL for healthcare and government data platforms.
- Developed mappings using Lookup, Joiner, Router and Aggregator transformations; tuned performance via partitioning and query optimization.

Technical Analyst | Flat World Technology / IBM Contract - Client: Airtel | Aug 2016 - Mar 2018

- Supported telecom BI operations, DataStage job monitoring, batch scheduling, SQL analysis and SLA-based issue resolution.

SELECTED PROJECT HIGHLIGHTS

- Microsoft Fabric PIT Reporting Platform | Riskonnect / Insurance
Working on multi-tenant PIT architecture covering client-instance isolation, Striim CDC ingestion, Bronze-Silver-Gold medallion flow, Delta CDF/MLV patterns, dispatcher queues, watermarking and idempotent Silver-to-Gold processing.
- Enterprise Data Platform | Rabobank / Netherlands Banking
Supported a centralized Azure data platform where multiple teams published and consumed data, with responsibilities around ADF/Databricks pipelines, curated datasets, snapshot loads, ETL testing and operational monitoring.
- Azure Migration & Analytics Platform | Kolmeo / Australia PropTech
Built ADF, Synapse/Databricks and Delta Lake pipelines across landing, extract and curated zones for migration, cleansing, enrichment and reporting workloads.

TECHNICAL TOOLKIT

- Cloud/Data: Azure Data Factory, ADLS, Synapse, Azure SQL, Microsoft Fabric, OneLake, Lakehouse, Delta Lake.
- Processing/ETL: Databricks, PySpark, Spark SQL, Informatica, DataStage, SQL, PL/SQL, Unix Shell, Python basics.
- Streaming/CDC/Orchestration: CDC patterns, incremental loads, Striim, Kafka concepts, dispatcher/orchestration design, Azure Functions, Autosys.
- BI/Semantic/Delivery: Power BI, Fabric semantic models, SSRS, data modeling, CI/CD with Azure DevOps, Git, Bitbucket, Agile/Scrum.

CERTIFICATIONS & EDUCATION

- Microsoft Certified: Azure Data Engineer Associate (DP-203)
- Microsoft Certified: Azure Data Fundamentals (DP-900)
- Bachelor of Engineering in Computer Science - Rajasthan Technical University, 2010 - 2014
